## IN THE CLAIMS:

## Listing of Claims:

- Claim 1. (currently amended) A golf club, comprising: 1
- 2 a head defined by a face and a top surface;
- an alignment assembly comprising a dome attached to said top surface, said dome 3

STEINS & ASSOCIATES

- 4 defining a non-hemispherical top member having a non-hemispherical top surface and an
- underside surface. . 5
- Claim 2. (currently amended) The club of Claim 1, wherein said dome is further 1
- defined by a top surface, said top surface having a linear slot formed therein, said slot 2
- penetrating said top member to interconnect said dome top surface and said dome 3
- underside surface; and 4
- whereby said head top surface is viewable through said slot formed in said 5
- dome. 6
- Claim 3. (original) The club of Claim 2, wherein said slot is aligned along a line that is 1
- 2 generally perpendicular to said face.
- Claim 4. (currently amended) The club of Claim 3, wherein said dome is further 1
- 2 defined by a void formed within said dome, said void bounded at its top by said top
- 3 surface and at its bottom by a projection surface, said projection surface being said head
- 4 top surface.
- 1 Claim 5. (currently amended) The club of Claim 34, wherein said projection surface
- 2 and said slot are cooperatively arranged whereby incident light upon said slot creates a
- 3 projected image of a line on said projection surface.
- 1 Claim 6. (original) The club of Claim 5, wherein said projection surface, slot and said
- 2 projected image are oriented whereby said projected image is aligned with said slot along
- 3 a parallactic alignment sight line.

Claim 7. (original) The club of Claim 1, wherein said dome is further defined by a top 1

STEINS & ASSOCIATES

- surface, said top surface having at least a pair of apertures formed therethrough. 2
- Claim 8. (original) The club of Claim 7, wherein said apertures are aligned along a line 1
- that is generally perpendicular to said face. 2
- Claim 9. (currently amended) The club of Claim 1, wherein said dome is defined by a 1
- top surface, said dome top surface is being said club head top surface. 2
- Claim 10. (currently amended) The club of Claim 9, wherein said top membersurface is 1
- defined by at least a pair of apertures formed therethrough, said apertures aligned in a line 2
- that is generally perpendicular to said face. 3
- Claim 11. (currently amended) The club of Claim 9, wherein said top surface is defined 3
- 2 by a thin, straight, linear slot formed therethrough, said slot defining a line that is
- 3 generally perpendicular to said face.
- 1 Claim 12. (currently amended) An alignment assembly for attachment to a top surface
- 2 of a golf club head, comprising:
- a dome defined by a top surface and a projection surface, said dome further 3
- defined by a slot formed in said top surface, said dome defining a non-hemispherical top 4
- 5 member having a non-hemispherical top surface and an underside surface, said underside
- б surface in spaced arrangement above said head top surface.
- 1 Claim 13. (original) The assembly of Claim 12, wherein said top surface further
- comprises at least one darkened portion of said surface adjacent to said slot. 2
- Claim 14. (original) The assembly of Claim 13, wherein said projection surface further
- 2 comprises a lightened portion.
- Claim 15. (currently amended) A golf club having a head defining a face and a top 1
- 2 surface, the head comprising:
- parallactic alignment means for defining a parallactic alignment sight line said 3
- parallactic alignment means comprising at least one aperture formed in an upper member. 4

- 5 said upper member being coplanar with said top surface and a projection surface
- 6 displayed on said head, below said at least one aperture and along said parallactic
- 7 alignment sight line, whereby light incident upon said at least one aperture will be
- 8 displayed on said projection surface; and
- 9 planar alignment means for defining a planar alignment sight line.
- 1 Claim 16. (currently amended) The club of Claim 15, wherein said planar alignment
- 2 means comprises a linear slot associated with said club oriented perpendicular to said
- 3 face, and said upper member is non-hemispherical.
- 1 Claim 17. (currently amended) The club of Claim 16, wherein said parallactic alignment
- 2 means comprises a dome attached to said head top surface, said slot formed in said dome.
- and said projection surface is non-cylindrical.
- Claim 18. (currently amended) The club of Claim 175, wherein said parallactic
- 2 alignment means comprises a projection surface associated with said head top surface
- 3 opposite to said slot; said projection surface is non-cylindrical.
- 1 Claim 19. (currently amended) The club of Claim 18, wherein said dome comprises a
- 2 clear dome having a pair of darkened portions adjacent to said slot, and a non-
- 3 hemispherical upper member.
- 1 Claim 20. (original) The club of Claim 19, wherein said projection surface further
- 2 comprises a lightened portion generally opposite to said slot.
